Summary

I am a fresher frontend developer with a strong foundation in web development technologies such as HTML, CSS, and JavaScript, and frameworks like React. I am familiar with libraries and tools such as Bootstrap, Material-UI, Redux, and REST APIs. Additionally, I have knowledge of server-side technologies like Node.js and databases such as MongoDB.

With a passion for creating responsive and user-friendly web applications, I am adept at understanding requirements and translating them into efficient code. I am always eager to learn and implement new technologies and looking forward to challenging roles in frontend development where I can make a significant impact.

Projects

MERN Stack Project

Project Name: E-commerce Website

The e-commerce website is a comprehensive platform designed for online retail businesses. It allows users to browse products with features such as user authentication, product search and filtering by category and rating, price sorting, and pagination. The website is structured to eventually include additional features like adding items to a cart and completing purchases, ensuring a seamless shopping experience

Responsibilities:

- Developed the front-end using React, incorporating Material-UI for design consistency and responsiveness.
- Implemented state management using Redux to handle application state effectively.
- Built the back-end with Node.js and Express, ensuring robust server-side operations.
- Utilized MongoDB for efficient database management and storage.
- Integrated REST APIs for smooth communication between the front-end and back-end.

Wanderlust

Airbnb Clone

<https://wanderlust-2rlr.onrender.com/listings>

User has worked on a project named "Wanderlust," which is a server-side rendering hotel/villa booking platform similar to Airbnb. Key features include user login/signup, authentication, authorization, and CRUD operations for managing listings and bookings. Responsibilities included developing the front-end with React and Material-UI, managing state with Redux, handling server-side operations using Node.js and Express, utilizing MongoDB for database management, and integrating REST APIs with secure authentication and authorization. Achievements include successfully launching core functionalities, improving page load times, and enhancing user security. The project is deployed using Render and can be accessed at <https://wanderlust-2rlr.onrender.com/listings>.

ReactJS Project

Technical Skills: React JS , Bootstrap

Project name: Todo List

github-link : <https://github.com/Shams109000/todo-list.git>

Amazon Clone

Technical Skills: HTML CSS

github-link : <https://github.com/Shams109000/Amazon-Clone.git>

ReactJS Project

Project Name: Tic Tac Toe game

github-link: <https://github.com/Shams109000/tic-tac-toe.git>

Technical Skills: React JS Tic Tac Toe game
